

**RegMarks XT: a QuarkXPress 7.31 or 7.5 extension (Mac OSX) in order to generate a PDF.**

**WHAT IS REGMARKS XT?**

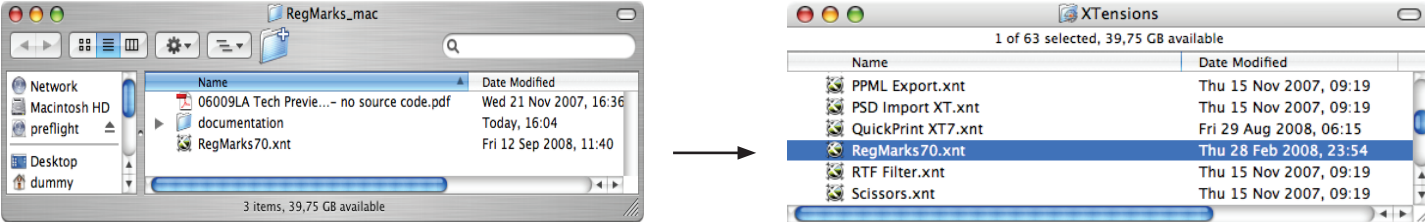

An extension which ensures the correct positioning of the mediabox in QuarkXPress. Without this XTension a white space of 3,5mm is added around the mediabox. The Regmarks XTension allows QuarkXPress users to create PDFs bearing the correct size (see picture 1).

**! ATTENTION PLEASE: IN QUARKXPRESS 7 THE BEST OPERATING PROCEDURE IS VIA “EXPORT TO PS” AS OPPOSED TO “PRINT TO PS”, WHICH PREVIOUSLY WAS THE STANDARD PROCEDURE FOR OLDER VERSIONS.**

**HOW TO INSTALL THE XTENSION?**

- 1/ Unzip the downloaded zip file 'RegMarks\_mac.zip'.
- 2/ Copy the extension 'RegMarks70.xnt' into the QuarkXPress XTensions folder by way of Applications>QuarkXPress Version>XTensions.

- 3/ At the next launch of QuarkXPress, the XTension 'RegMarks70.xnt' will automatically load.
